

COMMERCIAL & MUNICIPAL PROGRAMS

We know that energy is one of your biggest costs, especially here in New Hampshire. That's why New Hampshire Electric Co-op has dedicated staff, programs and financial incentives to help businesses, schools and municipalities save energy and money!

Commercial & Municipal Programs

Heating & Cooling

Heat Pump technologies result in a quiet, comfortable environment while providing the highest efficiency of all heating and cooling options. Incentives of up to \$500 per ton of installed capacity or \$750 per ton if combined with an approved weatherization project.

EV Charging

Incentives equal to 75% of the installed cost up to \$2,500 per installation for Level 2 (or higher) charging stations are available. Maximum of \$5,000 per location.

LED Lighting

Can cut lighting operating costs in half or more. Lighting incentives of up to 50% of material and labor available.

Building Weatherization

Greatly improves occupant comfort. Can significantly reduce heating and cooling operating costs. Incentives of up to 35% of the installed cost of weatherization measures.

Commercial Kitchen Equipment

Instant rebates available to purchase new commercial kitchen equipment through specific distributors.

Other Energy Savings Measures

Custom incentives are available for energy and cost saving measures such as Lighting Controls, Variable Frequency Drives, Compressed Air and other Process Equipment.

NEED OUR HELP? BUILDING NEW? MAJOR RENOVATION?

- Identify energy efficiency opportunities and technologies
- Guidance on NHEC program incentives to defray costs
- Assistance with incentive applications

ON BILL FINANCING AT 0%

Did you know that NHEC offers 0% On-Bill

Financing for projects? If the upfront cost of a project is preventing you from pursuing the project, [on-bill financing](#) removes the hurdle.

Repayment Guidelines:

\$500 to \$5,000 - up to 12 months
\$5,001 to \$10,000 - up to 24 months
\$10,001 to \$20,000 - up to 36 months

There are many opportunities to increase the efficiency, comfort and safety of your facility while reducing BOTH the upfront expense and long-term energy costs---all with no out of pocket expense!!

When it comes to improving your building, there are many opportunities to help increase the efficiency, comfort, and safety of your facility while reducing the upfront expense and long-term energy costs---and it all can be done with no out of pocket expense!!

HEATING, VENTILATION AND AIR CONDITIONING

Proper ventilation is essential for healthy indoor air quality. It creates the comfort you want while reducing the spread of viruses and mold growth. NHEC offers HVAC [incentives](#) that allow you to invest in the comfort and energy efficiency of your facilities. Since HVAC equipment is only replaced every 15-30 years, it makes sense to select the highest efficiency equipment available when you purchase a new system!

BUILDING WEATHERIZATION

A quality weatherization project can improve indoor air quality by reducing the uncontrolled and unfiltered air entering the building. This also improves comfort while reducing heating and cooling operating expenses. NHEC offers [incentives](#) of up to 35% for qualifying projects.

LIGHTING AND LIGHTING CONTROLS

LEDs can save 50% or more on your lighting costs and eliminate maintenance for years. Adding controls can provide additional energy savings. NHEC provides up to 50% [incentives](#) for pre-approved projects!

HIGH EFFICIENCY CONDENSING UNITS

The condensing unit is the heart of your refrigeration system. But these units are often old, inefficient and use expensive refrigerant that is not readily available. Replacing your existing condensing unit will save you energy while providing you peace of mind. No need to fill out paperwork or wait for a check. Instant incentives are available through select distributors. Call us to inquire: 800.698.2007.

REFRIGERATION CONTROLS

In addition to HECU, there are many opportunities to improve the efficiency of your reach in and walk in refrigeration and freezer units. Some of the opportunities include the addition of outside air economizers that use outside air instead of the refrigeration system when temperatures are cold enough, door

heater and evaporator fan controls, as well as automated controls which all can improve the efficiency of the system.

COMMERCIAL KITCHEN EQUIPMENT

NHEC offers a wide range of Food Service equipment incentives at point of purchase through a large number of distributors. No need to fill out paperwork or wait for a check. Incentives vary by equipment type.

CUSTOM PROJECTS

Do you have a project that is not listed above? [Custom incentives](#) are available for approved and qualified projects not covered by prescriptive incentives. A detailed engineering analysis that quantifies energy savings must be included in the required vendor proposal.
