

Transactive Energy Rate (TER) Aggregators

Note: The TER Aggregator is responsible for receiving the hourly price from NHEC and managing your device to provide you with the greatest financial benefit. The aggregator or their authorized installer will provide assistance with registering your device, as well as setup and interconnection of the device, if required. Any questions regarding device operation or maintenance should be directed to the aggregator or their authorized installer.

The following list of aggregators represents all the aggregators that have successfully integrated with the NHEC TER system. This list will be updated as new aggregators complete integration of their devices.
